## The Boyoz: Tanaguru Contrast-Finder

Automated Testing Suite By Nathan Bell, Paul Joseph, and Logan Sitar

## **Choosing a Project**

- After doing research, we narrowed our search down to **OpenMRS and Tanaguru**
- At first we choose OpenMRS because of the success we had deploying the code, yet we were having trouble finding meaningful methods to test.
- After finding out code deployment was not required, we settled on Tanaguru merely because the methods were easier to test

### What is OpenMRS?

- OpenMRS platform and other, foundational OpenMRS technical OpenMRS is a global community of truly dedicated, talented, and generous contributors who build and maintain the products.
- It is a platform that countries and implementers use to create a customized EMR system in response to actual needs on the ground. ı

### What is Tanaguru?

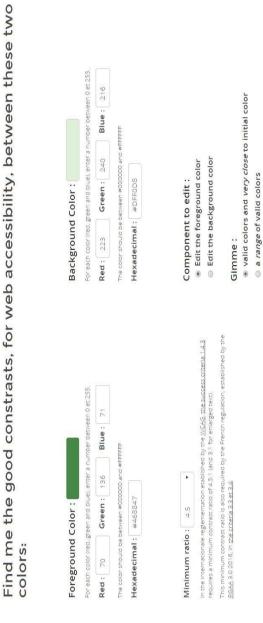

- Tanaguru is an open source website assessment tool that is dedicated to enhancing web quality and accessibility. They also focus on reliability and automation.
- It finds the best contrasts between two colors so a website is easily readable

## Tanaguru Example

### tanaguru contrast finder

Check and find contrast

## **Test Case Outline**

### **Example Test Case**

<u>:</u>

Requirement:

Class:

Method:

Input:

Expected Output:

# Class & Method Selection

- ColorConverter.java
- **ContrastChecker.java**
- **DistanceCalculator.java**

## ColorConverter, java

```
//uncomment this if-else statement and "return null;" and comment the above return to get correct output
                                                                                                                                        //one of these lines needs to be commented out for the code to run correctly
                                                                                                                                                                                             // uncomment this return and comment the other to break the code
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          && str.length() == RGB_SHORT_HEXA_LENGTH) {

# Requirements Traceability

distanceColor() - Calculates distance between two colors

getConstrastRatio() - Finds the contrast of an inputted color object

rgb2Hsl() - Converts a color object to a HSL value

hex2Rgb() - Converts hexadecimal value to a RGB value

calculate() - Calculates Euclidian distance between two colors

## Test Case Changes

### TestCase1.txt

```
Takes a color object and outputs a string of the HSL value (hue, saturation, lightness)
                                 ColorConverter.java
                                                               rgb2Hsl
                                                                                              0,0,0
```

"hsl(0.0, 0.0%, 0.0%)"

Converts a color object to a HSL value ColorConverter.java hsl(0, 0%, 0%) rgb2Hsl testCase\_01.txt 000000

### **Drivers**

- calculateDriver.java
- distanceColorDriver.java
- getContrastRatioDriver.java
- hex2RgbDriver.javargb2HsIDriver.java

```
Va 2

A public class rgb2HslDriver{

5 public static void main(String[] args){

6 ColorConverter checker = new ColorConverter();

7 String firstArg = "#" + args[0];
```

...

System.out.println(checker.rgb2Hs1(firstColor));

Color firstColor = Color.decode(firstArg);

### Script

for file in testCases/\*.txt #loop though all test cases

op

For each test case file

Read each line into a

Run the driver with the input Check it it matches output

```
#Check to see if test passed or failed
#pass fail messages are formatted to be an element of a table in html
if [ "$output" == "$expectedOutput" ]
then
                             while read line #fill an array with the data from the test cases
